

# Tutorial on Measurements and Metrics for Frequency, Time, and Packet Signals

**Lee Cosart**

[lcasart@symmetricom.com](mailto:lcasart@symmetricom.com)

ITSF 2013

# Presentation Outline

---

- Introduction
  - TIE vs. PDV
  - Frequency vs. Time
  - Network vs. Equipment Measurements
  - Phase Detector and Packet Probe
- Metrics: Synchronization and Packet Analysis
  - TIE and PDV based metrics (G.810 and G.8260)
  - Packet selection processes and methods
  - Frequency transport PDV metrics
  - Time transport PDV metrics
- Measurement Case Studies
  - Networks
    - Five networks: PDV
    - Backhaul network: time transport
- Conclusions

# Frequency signal “TIE” vs. “PDV”

- “TIE” (Single Point Measurement)

- Measurements are made at a single point – a single piece of equipment in a single location - a phase detector with reference - is needed

- “PDV” (Dual Point Measurement)

- Measurements are constructed from packets time-stamped at two points – in general two pieces of equipment, each with a reference, at two different locations – are needed

	Timestamp A	Timestamp B
F	1233166476.991204496	1233166476.991389744
R	1233166476.980521740	1233166476.980352932
F	1233166477.006829496	1233166477.007014512
R	1233166476.996147084	1233166476.995977932
F	1233166477.022454496	1233166477.022639568
R	1233166477.011771820	1233166477.011602932

# Time signal “Physical” vs. “Packet”

- “1 PPS” (Single Point Measurement)

- Measurements are made at a single point – a single piece of equipment in a single location - a phase detector with reference - is needed

- “Packet” (Dual Point Measurement)

- Measurements are constructed from packets time-stamped at two points – in general two pieces of equipment, each with a reference, at two different locations – are needed

	Timestamp A	Timestamp B
F	1286231440.883338640	1286231440.883338796

# TIE/PDV Measurements: Network vs. Equipment

Symmetricom TimeMonitor Analyzer (file=RB1DX1H.PAN)  
Phase deviation in units of time: Fs=984.0 MHz; Fo=2.0480000 MHz; 04/16/96:15:21:37

Network TIE

Symmetricom TimeMonitor Analyzer  
Phase deviation in units of time: Fs=499.4 MHz; Fo=10.000000 MHz; 2006/08/30 17:07:10  
Tahiti Phase; Samples: 49036; UUID: 00005501000A; Initial phase offset: 134.730 usec

Network PDV

Symmetricom TimeMonitor Analyzer (file=counter\_gps.dat)  
Phase deviation in units of time: Fs=58.80 MHz; Fo=1.0000000 Hz; \*7/12/2001 2:37:30 PM\*; \*7/15/2001 3:22:52 PM\*;  
HP 53132A; Test: 20; 58503A; Samples: 15400; Gate: 15 s; Ref ch1; TI/Time Data Only; TI 1->2;

Equipment TIE

Equipment PDV

## Passive Probe

vs.

## Active Probe

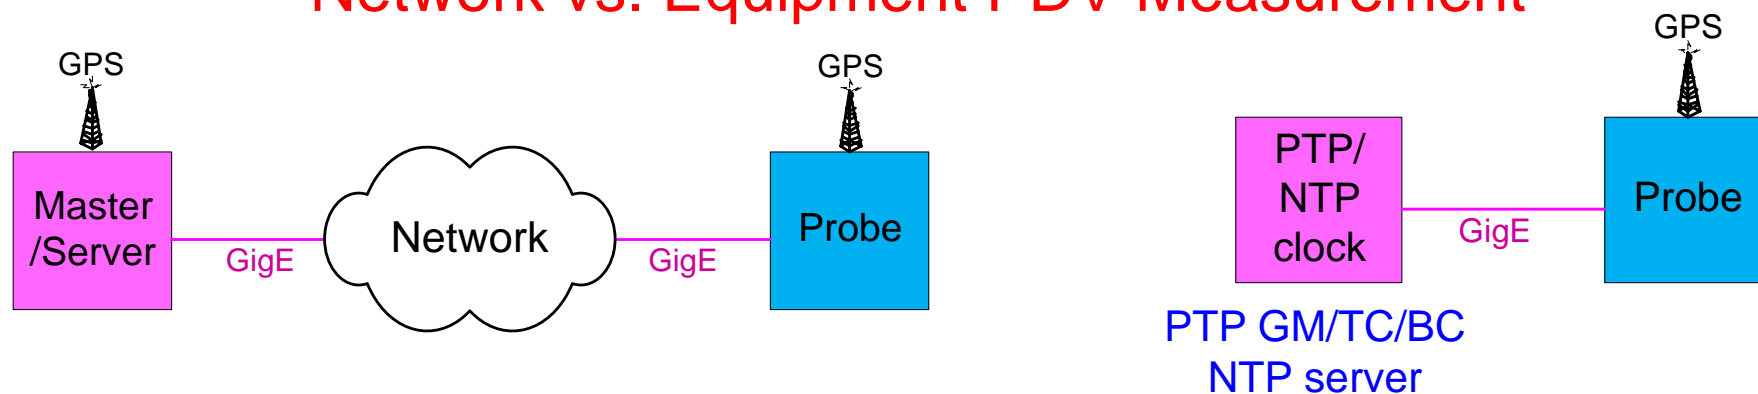

- (1) Hub or Ethernet Tap
- (2) IEEE 1588 Slave
- (3) Collection at Both Nodes

Passive probe sniffs packets: extra equipment required

- (1) No Hub or Ethernet Tap Needed
- (2) No IEEE 1588 Slave Needed
- (3) Collection at Probe Node Only

Active probe generates protocol: self-contained

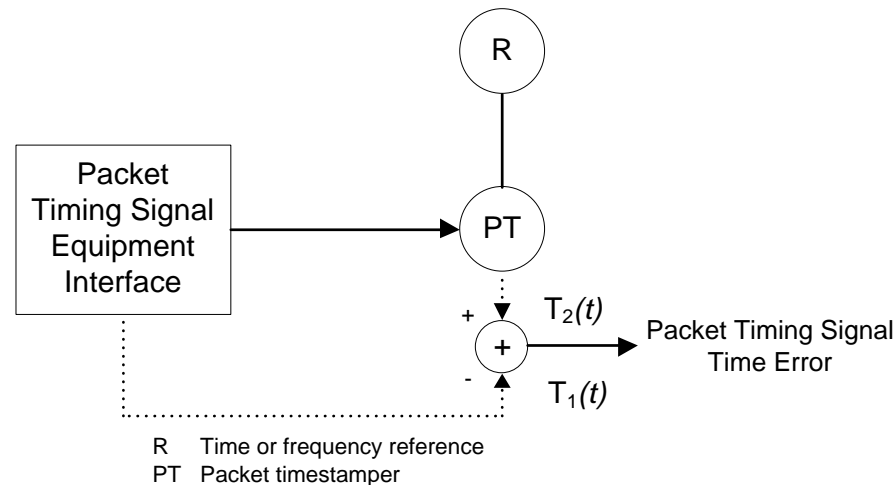

## Network vs. Equipment PDV Measurement

## Network PDV Measurement

## Packet Equipment Characterization

# “TIE” Analysis vs. “PDV” Analysis

## “TIE” Analysis (G.810)

- Phase (TIE)
- Frequency accuracy
- Dynamic frequency
- MTIE
- TDEV

## “PDV” Analysis (G.8260)

- Phase (PDV)
- Histogram/PDF\*, CDF\*\*, statistics
- Dynamic statistics
- MATIE/MAFE
- TDEV/minTDEV/bandTDEV
- Two-way metrics: minOffset etc.

- ▶ The importance of raw TIE/PDV:
  - Basis for frequency/statistical/MTIE/TDEV analysis
  - Timeline (degraded performance during times of high traffic?)
  - Measurement verification (jumps? offsets?)

\* *PDF = probability density function*

\*\* *CDF = cumulative distribution function*

- Traditional Clock Metrics

- ADEV, TDEV, MTIE
- Traditionally applied to oscillators, synchronization interfaces
- Also applied to lab packet equipment measurements **GM, BC**

- Frequency Transport Packet Metrics

- minTDEV, MAFE, MATIE
- Applied to one-way packet delay data
- FPP/FPR/FPC (floor packet percent/rate/count)

- Time Transport Packet Metrics

- minOffset or combine one-way (FPP, MAFE, etc.)
- Applied to two-way packet delay data
- Assesses link asymmetry

Packet  
Networks

# Analysis from Phase: Frequency

→  $-8.97 \cdot 10^{-14}$

## Frequency Accuracy

$$\omega = \frac{d\phi}{dt}$$

slope/linear: frequency offset  
curvature/quadratic: frequency drift

Symmetricom TimeMonitor Analyzer  
Fractional frequency offset: F=740.7 MHz; Fo=2.048 MHz; 08/15/08 07:55:45  
Holdover after 24 hours

1.5 E-9

## Point-by-point

Symmetricom TimeMonitor Analyzer (file=demo\_holdover.pan)  
Least square fit fractional frequency offset vs. time; N=100; 1/18/07; 19:44:26  
SSU holdover 4 days

1.2 E-11

## Segmented LSF

Symmetricom TimeMonitor Analyzer (file=demo\_holdover.pan)  
Fractional frequency offset; Overlap phase averaging; A=200; N=11056; Fs=32.26 MHz; Fo=2.048 MHz; 1/11  
SSU holdover 4 days

1.2 E-11

## Sliding Window Averaging

# Analysis from Phase: MTIE/TDEV

$$MTIE(S) = \max_{j=1}^{N-n+1} \left[ \max_{i=j}^{n+j-1} (x_i) - \min_{i=j}^{n+j-1} (x_i) \right]$$

MTIE is a peak detector  
MTIE detects frequency offset

$$\sigma_x(\tau) = TDEV(\tau) = \sqrt{\frac{1}{6} \left\langle \left[ \frac{1}{n} \sum_{i=1}^n x_{i+2n} - 2 \frac{1}{n} \sum_{i=1}^n x_{i+n} + \frac{1}{n} \sum_{i=1}^n x_i \right]^2 \right\rangle}$$

TDEV is a highly averaged “rms” type of calculation  
TDEV shows white, flicker, random walk noise processes  
TDEV does not show frequency offset

MTIE and TDEV analysis allows comparison to ATIS, Telcordia, ETSI, & ITU-T requirements

- Packet Selection Processes

**1) Pre-processed:** packet selection step prior to calculation

- Example: **TDEV**(PDV<sub>min</sub>) where PDV<sub>min</sub> is a new sequence based on minimum searches on the original PDV sequence

**2) Integrated:** packet selection integrated into calculation

- Example: **minTDEV**(PDV)

- Packet Selection Methods

– Minimum:  $x_{\min}(i) = \min[x_j] \text{ for } (i \leq j \leq i + n - 1)$

– Percentile:  $x'_{pct\_mean}(i) = \frac{1}{m} \sum_{j=0}^b x'_{j+i}$

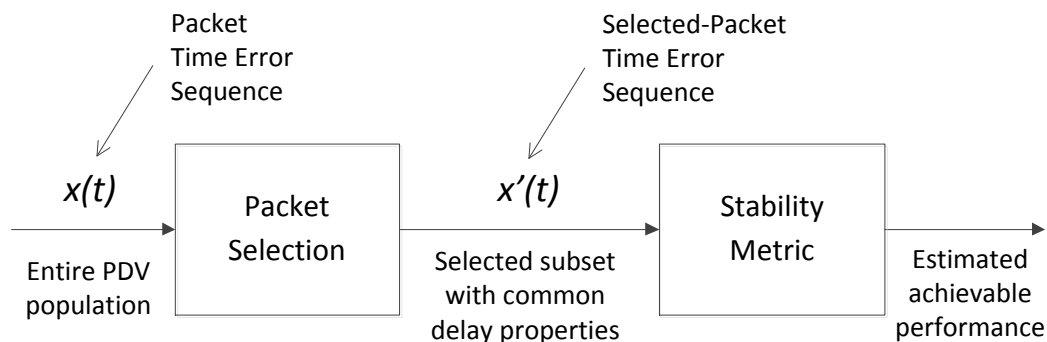

– Band:  $x'_{band\_mean}(i) = \frac{1}{m} \sum_{j=a}^b x'_{j+i}$

– Cluster: 
$$x(n\tau_0) = \frac{\sum_{i=0}^{(K-1)} w((nK+i)\tau_p) \cdot \phi(n,i)}{\sum_{i=0}^{(K-1)} \phi(n,i)} \quad \phi(n,i) = \begin{cases} 1 & \text{for } |w(nK+i) - \alpha(n)| < \delta \\ 0 & \text{otherwise} \end{cases}$$

# Packet Selection Windows

- Windows
  - **Non-overlapping windows**  
(next window starts at prior window stop)
  - **Skip-overlapping windows**  
(windows overlap but starting points skip over N samples)
  - **Overlapping windows**  
(windows slide sample by sample)
- Packet Selection Approaches (e.g. selecting fastest packets)
  - Select X% fastest packets (e.g. 2%)
  - Select N fastest packets (e.g. 10 fastest packets in a window)
  - Select all packets faster than Y (e.g. all packets faster than 150μs)

**Pre-processed packet selection**

**Integrated packet selection**

**Metrics including pre-filtering**

FPC, FPR, FPP: Floor Packet Count/Rate/Percent

**PDV metrics studying  
minimum floor delay packet  
population**

# Packet Delay Distribution

Symmetricom TimeMonitor Analyzer (file=xl\_1588\_pdv.tah)  
Phase deviation in units of time: Fs=500.0 MHz; Fo=10.000000 MHz; 2006/06/09 01:11:06  
XLI 1588 PDV Phase; Samples: 28561; UUID: 000055010016; Initial phase offset: 12.5420 usec

Packet Delay Sequence

Symmetricom TimeMonitor Analyzer  
Phase Deviation Histogram: Fs=500.0 MHz; Fo=10.00 MHz; 2006/06/09 01:11:06  
Tahiti Phase; Samples: 28561; UUID: 000055010016; Initial phase offset: 12.5420 usec

PDF

Minimum: 1.904297 usec	Mean: 96.71927 usec
Maximum: 275.2441 usec	Standard Deviation: 97.34 usec
Peak to Peak: 273.3 usec	Population: 28561      Percentage: 100.0%

Statistics

Symmetricom TimeMonitor Analyzer (file=xl\_1588\_pdv.tah)  
Phase Deviation CDF: Fs=500.0 MHz; Fo=10.00 MHz; 2006/06/09 01:11:06  
XLI 1588 PDV Phase; Samples: 28561; UUID: 000055010016; Initial phase offset: 12.5420 usec

CDF

50pct: 37.65 us; 90pct: 245.5 us; 95pct: 261.9 us; 99pct: 272.3 us; 99.9pct: 274.5 us

# Tracked Packet Delay Statistics

Symmetricom TimeMonitor Analyzer (file=destination-2007\_09\_19-09\_39.cap)  
Phase deviation in units of time: Fs=16.66 Hz; Fo=10.000000 MHz; 2007/09/19 07:45:00  
XLi 1588 PDV Phase; Samples: 50185; Start: 5114; Threshold: 27.0000 us; UUID: 00A069012F09; Initial phase offset: 24.1950 usec

Raw packet delay appears relatively static over time

Symmetricom TimeMonitor Analyzer (file=pdv-2007\_09\_19-09\_39\_mean.pan)  
Phase Mean; Overlap: Tau=10s; A=167; N=50019;  
Phase deviation in units of time: Fs=16.66 Hz; Fo=10.000000 MHz; 2007/09/19 07:45:00

Mean vs. time shows cyclical ramping more clearly

Symmetricom TimeMonitor Analyzer (file=pdv-2007\_09\_19-09\_39\_stddev.pan)  
Phase Standard Deviation; Overlap: Tau=10s; A=167; N=50019;  
Phase deviation in units of time: Fs=16.66 Hz; Fo=10.000000 MHz; 2007/09/19 07:45:00

Standard deviation vs. time shows a quick ramp up to a flat peak

## TDEV

$$\sigma_x(\tau) = TDEV(\tau) = \sqrt{\frac{1}{6} \left\langle \left[ \frac{1}{n} \sum_{i=1}^n x_{i+2n} - 2 \frac{1}{n} \sum_{i=1}^n x_{i+n} + \frac{1}{n} \sum_{i=1}^n x_i \right]^2 \right\rangle}$$

## minTDEV

$$\sigma_{x\_min}(\tau) = \min TDEV(\tau) = \sqrt{\frac{1}{6} \left\langle [x_{min}(i+2n) - 2x_{min}(i+n) + x_{min}(i)]^2 \right\rangle} \quad x_{min}(i) = \min [x_j] \text{ for } (i \leq j \leq i+n-1)$$

## bandTDEV

$$\sigma_{x\_band}(\tau) = bandTDEV(\tau) = \sqrt{\frac{1}{6} \left\langle [x'_{band\_mean}(i+2n) - 2x'_{band\_mean}(i+n) + x'_{band\_mean}(i)]^2 \right\rangle} \quad x'_{band\_mean}(i) = \frac{1}{m} \sum_{j=a}^b x'_{j+i}$$

PDV noise type  
characterization  
w/ packet selection

1. TDEV is bandTDEV(0.0 to 1.0)
2. minTDEV is bandTDEV(0.0 to 0.0)
3. percentileTDEV is bandTDEV(0.0 to B) with B between 0.0 and 1.0

## MATIE

$$MATIE(n\tau_0) \cong \max_{1 \leq k \leq N-2n+1} \frac{1}{n} \left| \sum_{i=k}^{n+k-1} (x_{i+n} - x_i) \right|, \quad n = 1, 2, \dots, \text{integer part } (N/2)$$

## MAFE

$$MAFE(n\tau_0) = \frac{MATIE(n\tau_0)}{n\tau_0}$$

## minMAFE

$$\min MAFE(n\tau_0) \cong \frac{\max_{1 \leq k \leq N-2n+1} \left| \sum_{i=k}^{n+k-1} (x_{min}(i+n) - x_{min}(i)) \right|}{n\tau_0} \quad \text{where } n = 1, 2, \dots, \text{integer part } (N/2) \text{ and where } x_{min}(i) = \min [x_j] \text{ for } (i \leq j \leq i+n-1)$$

PDV frequency transport performance

## FPP

$$FPP(n, W, \delta) = \left( \frac{\tau_P}{W} \right) \times FPC(n, W, \delta) \times 100 \% \quad \text{for } (K-1) \leq n < N$$

where

$$FPC(n, W, \delta) = \sum_{j=n-(K-1)}^n \phi_F(j, \delta) \quad \text{for } (K-1) \leq n < N$$

PDV phase/frequency delivery

# TDEV & minTDEV with Traffic

TDEV

Lower levels of noise with the application of a MINIMUM selection algorithm  
minTDEV at various traffic levels on a switch (0% to 50%) converge

Symmetricom TimeMonitor Analyzer (file=multilayer\_switch\_40percentSB60.txt)  
minTDEV; No. Avg=1; Fo=10.00 MHz; 2006/09/19; 15:28:30

minTDEV

# MATIE and 1588 Slave Frequency Offset

Packet measurement

Packet data analysis:  
1PPB offset predicted

Symmetricon TimeMonitor Analyzer  
MTIE; Fo=2.048 MHz; Fs=499.8 mHz; 2009/09/04; 17:08:49  
G.823 1PPB mask

Sync measurement

1588 slave performance:  
1 PPB offset measured

## “PDV” measurement setup for time transport

- ✓ – Ideal setup - two packet timestampers with GPS reference so absolute latency can be measured as well as PDV over small to large areas
- ✓ – Alternative setup (lab) – frequency (or GPS) locked single shelf with two packet timestampers
- ✗ – Alternative setup (field) – frequency locked packet timestampers – PDV but neither latency nor asymmetry can be measured

# Time Metrics: Time Accuracy and Stability

Time Accuracy  
Time Error:  $\leq 100\text{ns}$

MTIE

Time Stability  
TDEV

## Packet Network Limits

### Deployment Case 1

Network Time Reference  
(e.g. GNSS Engine)

A: Time Error:  $\leq 100\text{ns}$

### Deployment Case 2

Network Time Reference  
(e.g. GNSS Engine)

C: Time Error:  $\leq 1.1\mu\text{s}$

# Metrics: Time Transport

## Forward Packet Delay Sequence

0.1000, 1.54E-6, 1.09E-6  
0.2000, 1.23E-6, 1.12E-6  
0.3000, 1.40E-6, 1.13E-6  
0.4000, 1.47E-6, 1.22E-6  
0.5000, 1.51E-6, 1.05E-6

Two-way  
Data Set

Constructing  $f'$  and  $r'$   
from  $f$  and  $r$  with a 3-  
sample time window

Time(s)	$f(\mu s)$	$r(\mu s)$	$f'(\mu s)$	$r'(\mu s)$
0.0	1.47	1.11		
0.1	1.54	1.09	1.23	1.09
0.2	1.23	1.12		
0.3	1.40	1.13		
0.4	1.47	1.22	1.40	1.05
0.5	1.51	1.05		

Minimum Search  
Sequence

0.1 0.07  
0.4 0.18

minOffset

$$\eta_2'(n') = \left(\frac{1}{2}\right) \cdot [F'(n') - R'(n')]$$

## Forward/Reverse FPP

Symmetricom TimeMonitor Analyzer  
Floor Packet Percent; Window=200 s; Range=50.0 us; Floor=-54.3 us; Fmin; T=200 s; A=3200; N=382  
1 (blue): Fwd FPP; 2 (red): Rev FPP

Approaches:

- (1) Based on both one-way sequences
- (2) Based on a single sequence constructed from both one-way sequences (e.g. offset)

## Two-way MAFE (MAFE of minOffset)

Symmetricom TimeMonitor Analyzer (file=probe-2008\_09\_04-12\_54d.tpk)  
MAFE; Fo=10.00 MHz; Fs=100.6 MHz; 2008/09/04; 16:55:05

# Case Studies: Five Networks

## #1,#2,#3 PDV Percentile: 1%

Symmetricom TimeMonitor Analyzer  
Phase deviation in units of time; Fs=499.4 mHz; Fo=10.000000 MHz; 2006/08/30; 21:07:10

What FPP level could be set to get at least 1% of the packets?

## #4,#5 PDV Percentile: 1%

Symmetricom TimeMonitor Analyzer  
Phase deviation in units of time; Fs=16.00 Hz; Fo=10.000000 MHz; 2013/03/27; 20:03:11  
4 [green]: Phase Floor Percentile; Tau=200s; P=1%; A=3200; F=32; N=382; 2013/03/27; 20:03:11; 5 [cyan]  
84.0 usec

	Max 1 Percentile
U.S. Ethernet south	2.04 $\mu$ sec
U.S. Ethernet north	2.60 $\mu$ sec
Backhaul N America	13.8 $\mu$ sec
Eth/SONET	47.8 $\mu$ sec
Backhaul Europe	72.6 $\mu$ sec

## Asymmetry in Wireless Backhaul

(Ethernet wireless backhaul asymmetry and IEEE 1588 slave 1PPS under these asymmetrical network conditions)

- Types of measurements
  - Frequency, Time, and Packet Signals
  - “TIE” vs. Packet “PDV”
  - Network vs. Equipment
  - Packet probes: passive vs. active, PTP vs. NTP
- Clock and Packet Analysis
  - TIE analysis methods inform approach to PDV analysis
  - Stability metrics (1) Preprocessed or (2) Integrated packet selection
  - Frequency transport metrics
  - Time transport metrics
    - Accuracy vs. stability
    - Stability analysis from (1) both one-way or (2) combined sequence
- Measurement Case Studies
  - Networks
    - Five networks
    - Network time transport

# Thank You
